

ANDREW R. GOAD

SENIOR ANALYTICS & APPLIED DATA SCIENCE LEADER | DECISION SYSTEMS | CONSUMER CREDIT

Lexington, SC | 571-425-6810 | ar.goad@yahoo.com | linkedin.com/in/andrewrgoad | github.com/andrew-goad

EXECUTIVE PROFILE

Senior analytics and applied data science leader with 16+ years across Wells Fargo, the Office of the Comptroller of the Currency, and the U.S. Census Bureau. Advanced at Wells Fargo to Senior Lead Analytics Consultant at the Executive Director level, leading analytics for Collateral Protection Insurance (CPI) and other Consumer Auto customer-remediation programs representing more than \$1B in exposure and customer impact. Nearly nine years of federal service combined credit-risk research, examination/stress-testing support, CECL, validation, and statistical-production dashboards. Combines SAS, SQL, and Python with governed delivery and executive decision support. Independent synthetic projects demonstrate configurable credit strategy, merchant-financing lifecycles, interactive Power BI, and AI-assisted development with human-owned acceptance.

REQUIREMENTS → EXECUTABLE REMEDIATION Business requirements; population identification; redress logic; FCRA/Metro 2; execution handoffs.	INDEPENDENT CHALLENGE → ASSURANCE Recalculation/reconciliation; challenger/sensitivity testing; UAT; data fitness; Audit/regulatory evidence.
DATA → DECISION EXPLANATION Longitudinal data; Tableau; Power BI (portfolio); automated narratives; data lineage and traceability.	DECISION → CONTROLLED DELIVERY Decision Forums; treatment alternatives; cross-functional dependencies; implementation, review, and closure.

PROFESSIONAL EXPERIENCE

WELLS FARGO | *Consumer Auto Finance*

Executive Director - Senior Lead Analytics Consultant

03/2018 - 04/2026

Vice President - Lead Analytics Consultant

06/2022 - 04/2026

Tools: SAS (Enterprise Guide), SQL, Teradata, Git/GitHub, Excel, PuTTY, SharePoint, Jira, PowerPoint

03/2018 - 06/2022

Led end-to-end Consumer Auto remediation analytics, from identifying affected customers and calculating redress through execution and review. Served as principal analytical architect for CPI and advised business, risk, legal, and execution partners on customer impact, treatment options, and implementation.

- **CPI customer-remediation analytics and delivery (2018-2025):** Designed and owned Direct and Indirect Auto recalculation tools and weekly proof-of-insurance intake/QA for coverage adjustments, customer redress, time-value-of-money relief, and prior-payment netting. Led seven years of recurring analytical production, integrated manual-review outcomes, and prepared proof-of-insurance intake, treatment, and methodology/QA evidence for federal-regulatory requests. Independent Audit found 100% alignment between retained proof-of-insurance evidence and reviewed third-party vendor inputs.
- **CPI credit-reporting correction:** Led correction of ~850,000 accounts through ~200 Metro 2-aligned external mass-maintenance submissions and coordinated internal system updates. Preserved borrower/account lineage, before-and-after values, and effective dates for execution and validation; produced and validated SAS feeds supporting CPI dashboard views for management, complaint research, and review.
- **Broader remediation delivery (2020-2026):** Led 15+ additional workstreams spanning SCRA benefits, COVID deferrals, disaster relief, a data-center outage, payoff-date reporting, and furnishing issues. Designed analytical business requirements and rules, Data Analytical Approaches, and Population Identification Workbooks; proved affected populations for manual review and execution handoff. Owned SAS/SQL processing, outputs, run procedures, and validation evidence under the Remediation Target Operating Model; coordinated specialist dependencies through Population Identification Review (PIR), Independent Testing & Validation (IT&V), Audit, and regulatory review.
- **Remediation decision leadership:** Framed customer-impact issues, compared treatment alternatives and customer/control consequences, and presented recommendations to Decision Forums. Answered challenge, documented approved decisions and changes, and ensured their incorporation into analytical execution while reviewing partner-owned artifacts for alignment.
- **Preserving favorable customer credit reporting:** Built a historical action record and account-month controls to prevent later remediation, complaint, or furnishing activity from overwriting more favorable reporting. Standardized 500+ archived submission files representing 100M+ account-month actions, aligned proposed updates with prior activity, led User Acceptance Testing (UAT) separately, and supported targeted correction. Defended a unified customer-relief approach while preserving reporting that distinguished remediation-caused from furnishing-caused overwrites.
- **Targeted furnishing strategy and reusable Common Code:** Challenged a defensible but overbroad credit re-furnishing approach; benchmarked broad and targeted alternatives; designed account- and impact-month execution that preserved favorable reporting and customer protection; reduced cost by ~\$60K per submission; and advanced the solution through the FCRA Decision Forum and Common Code governance with a BRD, Job Aid, and department-wide training.
- **Reusable execution data:** Built the Consumer Auto implementation of enterprise Standard Data Format requirements and reusable Teradata upload logic for the Universal Data Layer archive, supporting consistent execution records, automation, and later reconciliation/review.
- **Tax-reporting delivery:** Standardized Consumer Auto Remediation 1099-INT/1099-MISC reporting and operated the annual CPI requirements-to-pilot-to-production cycle with independent testing and Audit support.
- **Technical leadership and review continuity:** Advised or peer reviewed 10+ additional credit-reporting efforts and mentored data leads. Partnered with IT&V to close aged reviews after staff turnover by reconstructing code and evidence, rerunning analyses end to end, and reconciling results to original execution.

FEDERAL CREDIT-RISK & ANALYTICS EXPERIENCE

OFFICE OF THE COMPTROLLER OF THE CURRENCY (OCC) | *Credit Risk Analysis Division*

03/2014 - 03/2018

Research Analyst

Tools: SAS (Enterprise Guide), SQL, Python, Tableau, ArcGIS, Excel/VBA, Adobe batch processing

Partnered with 16 OCC Credit Risk Economists and provided requested analysis to examination teams. Recalculated/reconciled evidence, investigated results, and delivered Tableau views and explanations; mentored junior analysts and interns.

- **Long-term Auto risk and pricing research:** Built and validated a longitudinal bureau panel of 875,516 loans / 2.36M loan-year observations for economist-led analysis of loan term, delinquency risk, and customer pricing. Linked borrower/account histories and engineered borrower/account, term, loan-age and payment measures; defined first 90-DPD events and Journal-version prepayment/maturity exits. Derived customer APR and same-maturity Treasury spreads and reconciled source data, model inputs and outputs for discrete-time delinquency/logistic and OLS pricing analyses.
- **DFAST examination and stress-testing support:** Provided requested analysis to OCC economists and examination teams across the DFAST review process as credit-portfolio questions arose. Analyzed bank data and nine-quarter stress projections, tested portfolio segmentation using decision trees, and compared aggregate and segment-level stressed performance to identify issues for further review.
- **CECL and lifetime credit-risk analysis:** Developed and tested marginal-PD term structures and vintage/cohort approaches to compare one-year and lifetime risk implications for OCC economists. Evaluated vendor data and historical coverage, advised on acquisition, compared assumptions and sensitivities, and presented recurring findings.
- **Cross-bank and cross-product credit analysis:** Built SAS entity-resolution and fuzzy-matching logic linking syndicated-credit records for comparison of banks' internal risk ratings on shared obligors and exposures. Standardized fields, investigated match exceptions, and prepared cross-bank benchmark data. Separately designed obligor-level event sequencing to identify first and subsequent delinquency/default events across consumer products.

Selected research supported: "Risks of Long-Term Auto Loans," *Journal of Credit Risk*; and "A Puzzle in the Relation Between Risk and Pricing of Long-Term Auto Loans," OCC WP-2020-03. Both publications publicly acknowledge Andrew Goad for "excellent research support."

U.S. CENSUS BUREAU | *Service Sector Statistics / Company Statistics*

07/2009 - 03/2014

Survey Statistician

Tools: SAS, SQL, Microsoft Access, Excel/VBA, JavaScript, HTML

Built analytical tools and supported statistical production for the Annual Capital Expenditures Survey (ACES) and Annual Retail Trade Survey (ARTS), helping analysts identify material reporting issues and produce published economic statistics. Led day-to-day ACES production and escalation handling while developing repeatable validation and reporting processes.

- **ACES analytical tools and production leadership:** Built SAS-to-Access-to-JavaScript/HTML dashboards that directed analysts toward material year-over-year discrepancies and high-impact nonrespondents and gave management industry and production-progress views. Led day-to-day production for a six-analyst nightly refresh team and handled processing and data-quality escalations.
- **ARTS validation and statistical reporting:** Built industry-tailored SAS-to-Excel/VBA workbooks that analysts refreshed on demand to investigate company-level drivers of industry anomalies and survey exceptions. Developed editing, imputation, response-tracking, disclosure-avoidance, and benchmarking processes, with methodology, runbooks, and published reporting.

SELECTED APPLIED DATA SCIENCE & DECISION SYSTEMS PORTFOLIO

github.com/andrew-goad | Independent, synthetic, non-production | [Human-in-the-Loop case study](#)

Directed AI-assisted development; owned requirements, validation and acceptance. Public code and evidence.

- **MSBF · Merchant Credit Intelligence (PostgreSQL / Python / Power BI):** Designed and published a configurable merchant sales-based financing platform; challenged premature assessment stops and directed evaluation of permitted counteroffers, preserving evidence requirements and decision-authority limits.
- **Interactive credit-risk intelligence:** Built connected Power BI cohort views filtered by industry, acquisition source, scenario and time, with merchant-level narratives explaining operating evidence, economics and decisions; linked 130 funded scenario paths to 120 days of daily remittance/monitoring and an account-attention workbench.
- **Enterprise Credit Decisioning Strategy Simulator (PostgreSQL / SAS / Power BI):** Built a configurable policy and counteroffer testing environment and executed 39 runs of 50,000 synthetic applications each—1.95M decision evaluations—to compare access, affordability, exposure, and review/decline trade-offs under retained strategy settings.
- **Explaining analytical version changes:** Improved synthetic-population coherence through mortgage, risk-proxy, scenario, and revolving-payment enhancements; used SAS reconciliation of 50,000 matched before/after applications to support Power BI executive summaries and automated application-level explanations of what changed.
- **Survival Strategy Framework (Python):** Directed development and executed a reproducible synthetic customer-retention and time-to-event workflow, with data preparation, risk comparisons, validation evidence, same-cohort scenarios, and executive/technical reports; kept descriptive personas separate from the survival model.

EDUCATION, CREDENTIALS & TECHNICAL TOOLKIT

- **Education:** Bachelor of Arts in Economics; Minor in Mathematics - Virginia Tech, Blacksburg, VA | 2005-2009.
- **Credentials:** SAS Base Programming and Advanced Programming Professional certifications (2009); Lean Six Sigma Yellow Belt - OCC; Associate Citation in Project Management - George Washington University.
- **Professional engineering:** SAS Enterprise Guide, Macro, PROC SQL, PROC FCMP; SQL/Teradata; Python; ETL (extract, transform, load); data governance; data quality/lineage; source-to-target mapping; Git/GitHub; Microsoft Excel/VBA; Tableau; ArcGIS.
- **Current portfolio methods and platforms:** PostgreSQL; Power BI Desktop, Power Query, Data Analysis Expressions (DAX); relational semantic modeling; pandas, NumPy, scikit-learn, lifelines; survival analysis (regularized CoxPH, Kaplan-Meier); K-Means; cross-validation, calibration, and proportional-hazards review.
